

Celuform PVC-ue is a perfect match for timber

Residents of a block of flats in Hythe, Kent, have made huge savings on their maintenance charges thanks to Celuform.

The cost of repainting the old timber fascia and soffit at Millbrook Flats was thousands of pounds every time it needed doing. The new low-maintenance PVC-ue replacements have eliminated this at a stroke. To meet planning requirements, Celuform's Espresso Brown was used.

"It was a perfect match to the original stained timber used on the flats and we had to satisfy planning restrictions," says Colin Jones of C & S Roofing of St Mary's Bay, Kent. "By using Celuform's products rather than timber, we also met the property management company's target of minimising ongoing maintenance.

The original timber had to be treated and painted on a regular basis, whereas Celuform products have a 15 year guarantee against fading or discolouration and need only wiping down to make them look as good as new."

Colin says that another major advantage of Celuform products is the

wide variety of sizes in which they are available.

Colin explains, "Celuform is very versatile. When you work on different projects with everything from bungalows to flats to semis, you don't want to have to cut and prepare the product on site. Celuform can provide any size you require – and at competitive prices."

Espresso Brown is available on a large selection of Celuform's best selling roofline and cladding profiles, including Open V-Joint, Elite, Conquest and multi-purpose board. Developed by Dupont for the aerospace industry, the foil is designed to withstand extremes of temperature variation and ultra violet light exposure.

These properties are vital where large areas of PVC are subjected to weathering such, as on the cladding of buildings. The foil is exclusive to Celuform and is the highest specification product of its kind available in the UK.

Celuform offers a wide range of foiled and coloured profiles that are guaranteed against fading and changes in colour.
