

Luxury riverside development features Celuform fascia

New luxury riverside apartments in Southampton feature Celuform PVC-ue fascia and cladding.

The Kings Oak Homes property at Clausentum Quay, Bitterne, is a stunning development of 73 two-bedroom, two bathroom apartments on the banks of the River Itchen, close to the centre of Southampton, many with balconies and river views.

The Celuform Conquest fascia and Open V-Joint Hollow Section cladding have been specified for the unusual three-dimensional gables that are a feature of the site.

Conquest is a 19mm square-edged board with fixed groove and return leg and it will accept horizontal or inclined soffit boards.

Rainwater systems can be fixed directly to the fascia without needing timber support. It is available in widths ranging from 150mm to 400mm.

The cladding is a rigid PVC-u, hollow chambered system, with open V-jointing, available in two widths, 100mm or 300mm.

A comprehensive range of edge, corner and joint trims ensures a neat and complete finishing.
