

## Cladding saves £25k refurb costs

A fish processing plant in the Faroe Islands has been clad in white shiplap low maintenance PVC-ue cladding supplied by Celuform.

The United Seafood owned plant, subject to the ravages of the sea air and local climate, was repainted at a cost of £25,000 a time on many occasions since the factory opened in 1954.

The installation of the white cellular plastic cladding eliminates this cost and with it comes a 15-year guarantee against fading or yellowing.

In addition, the buildings will now remain looking clean and fresh, instead of becoming progressively more

unsightly between painting.

Local stockist, Klement Petersen, was also delighted because Celuform was able to meet a tight deadline, responding to a request for a quote within 24 hours.

Celuform PVC-ue cladding provides a stylish and effective means to protect and decorate the exterior of buildings, without the need for continual and costly maintenance. It is ideal for new build or refurbishment and is tough, impermeable and resistant to weather and decay.
