

## Celutex – Giving Design Flexibility

Celutex is the original, lightweight, shiplap embossed PVC-UE building cladding board that provides a stylish and effective means to protect and decorate the exterior of buildings - without the need for continual and costly maintenance and decoration.

It successfully imitates timber with authentic wood grain look-a-like features and can be installed using traditional wood installation skills, practices and tools. Available in two size formats – single plank (150mm) and double plank (300mm) format for rapid installation, Celutex is completely unaffected by damp, rot, decay, frost and is resistant to attack from insects.

Celutex is manufactured using PVC-UE stabilisers guaranteed to give the best colour resistance. Celutex is available in a wide variety of contemporary colours and complemented with a comprehensive range of colour co-ordinated fixing trims to allow extra versatility and design expression.
