

Celutex PVC-UE Cladding Chosen for Top of the Range Holiday Home

Celuflex, the specifier's choice of PVC-UE roofline, cladding and window finishing products, is pleased to announce the inclusion of its Celutex cladding product on Regal Holiday Homes' top of the range mobile home, Autograph. Tony Crutcher, Sales and Marketing Director of Celuflex explains: "Celutex, the 100% Calcium Organic alternative to fibre cement siding is a maintenance free alternative to timber cladding. Developed under patent in response to growing demand for authentic looking wood effect cladding, the PVC-UE embossed wood grain finish is indistinguishable from timber. Unlike wood however, it is completely unaffected by damp, rot, decay, frost or insect attack and comes with a structural guarantee of 15 years. Installers tell us it's a dream to fit too thanks to its availability in single or double plank versions. Landscapes or a park of

holiday homes need no longer need to be 'PVC whitewashed' either, as Celutex comes in Warm White, Cream and Sand."

Nigel Heslington, Managing Director of Regal Holiday Homes explains why they chose Celutex for their Autograph holiday homes: "Autograph is the top of our range and comes with central heating and double glazing as standard, so we wanted the best cladding product available to give the outside of the home the same quality feel as the inside. We also wanted the Autograph range to be visually striking from the outside as well as inside, to give customers the right first impression. Celutex has allowed us to achieve this. All of our mobile holiday homes are built in accordance with EN1647 and have been accredited by the National Caravan Council."
