

Pvc-ue specifications increasing for caravans and park homes

A company that traditionally supplies the building industry is finding that caravan and park home manufacturers in the UK and abroad are also specifying its products.

Celuform is increasingly being asked by the caravan industry to provide fascias, skirtings and windowboards for a wide selection of mobile and static accommodation.

“PVC-ue building products are perfect for these applications because they are very lightweight, highly durable and have excellent impact resistance,” says Ged Ferris, Celuform’s marketing manager.

“Products such as Duoliner, a PVC-ue window liner that combines strength with a slim profile. It is the lowest priced reveal liner board available in the UK.

Duoliner features DuoShield, a co-extrusion process unique to Celuform that provides unrivalled rigidity and durability. Despite being only 8mm thick, Duoliner is the optimum strength/thickness ratio for a PVC-ue board and has a co-extruded finish both front and rear. In common with other Celuform roofline and cladding products, it is guaranteed for 15 years against rot, fading or yellowing.

One of the best selling external fascias is Conquest Torus, a board with an ogee feature to add interest to the roofline. It also incorporates a groove that will accept horizontal or inclined soffit boards. Rainwater systems can be fixed directly to the fascia without needing additional support. It is available in widths ranging from 150mm to 400mm.

Celuform has one of the largest selections of PVC-ue fascias and soffits, as well as skirtings, windowboards and trims, many of which are available in a wide selection of thicknesses, widths, finishes and colours.
