

Celuform chosen for exclusive homes

An award winning developer of luxury homes is using PVC-ue soffit, cladding and fascia from Celuform on a range of exclusive properties.

Manor Kingdom are one of the UK's leading builders of bespoke luxury homes and have been creating a number of developments across central Scotland. A typical site where Celuform products have been used extensively is Pinewoods, nestling in the Tweed Valley, near Peebles. The development includes 3, 4 and 5 bedroom detached homes in a range of unique styles. Many of the homes adjoin the new 18-hole Cardrona Golf & Country Club with its championship golf course.

Another example is Kip Village, a stunning new waterfront development of 195 homes built around Kip Marina at Inverkip. This site includes luxury apartments, penthouses, townhouses, terraced and executive-style detached villas.

"Quality is all important for us and the roofline materials supplied by Celuform meet key criteria," said Sheena Charity, Group Sales and Marketing Director of

Manor Kingdom.

"Celuform has been a supplier for a number of years. Appearance of product and quality of service and back-up are key," she continued.

Ronnie Watson of Clyde Insulation, the local Celuform stockist, commented, "Celuform's Elite 25mm bullnose board was chosen as well as Conquest fascia and soffit. Some of the porch areas on the Inverkip development have open V joint cladding. All provide a clean, low maintenance finish."
